

ADVANCED DIPLOMA IN EMERGENCY NURSING

Overview

This course will prepare students with the knowledge, skills and characteristics suited to patient management and nursing in an emergency situation. Studies will include both aspects of theory and clinical practice in a recognised unit/ward to ensure that students will receive all necessary required knowledge and experience. The importance of working as a member of a team will also be emphasised. Students will be provided with pre-requisite knowledge regarding normal physiology and pathophysiology that occurs when a patient undergoes trauma or emergency. Students will be taught patient management according to emergency nursing principles, in addition to diagnosis skills and management of medico-legal cases.

Benefits

At the end clinical specialisation course, students will be able to:

- Enhance their knowledge and skills in a specific field of clinical nursing specialisation.
- Apply nursing values and ethics in the management of patients.
- Apply research knowledge in clinical practice.
- Take on a leadership role in providing guidance to colleagues and students enabling them to be more effective and proficient in their specific clinical practice.
- Demonstrate specific clinical practice that is of greater competence.

Programme structure
